

KUBOTA TECHNOLOGY

Hydraulic 6-in-1 Blade

Kubota's new hydraulic 6-in-1 Blade can be angled right and left, and now, tilted as well. This new blade enables six different positions: neutral, float-up, left-end-up, right-end-up, left-end-forward and right-end-forward. This feature makes leveling and backfilling work incredibly easy, even on inclines and uneven terrain, making you more productive and more efficient.

1. Indicator

A convenient indicator makes it simple to return the blade to its original position.

2. Top cover

For added durability and increased protection from soil, dirt and rocks, we've covered the tilt cylinder.

3. Float position

Unlike many other models in its class, the KX121-3S's hydraulic 6-in-1 Blade is equipped with a float position mechanism. This feature dramatically improves efficiency during backfilling work.

4. Bolt-on cutting edge

Kubota's 6-in-1 Blade features a standard-equipped, durable cutting edge that protects the blade during heavy-duty dozing operations. The edge is divided into two sections for easy maintenance and simple replacement.

KUBOTA TECHNOLOGY

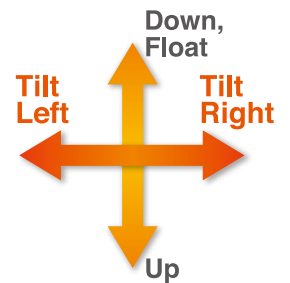

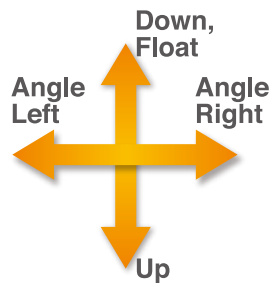

Hydraulic 6-in-1 Blade

Easy single-lever operation

With a single lever and the push of a button, the 6-in-1 Blade is at your command. You can angle the blade by moving the lever right or left. To tilt the blade, press the “T” button atop the lever while moving the lever. Now you can attack leveling duties with unprecedented ease—with just one lever.

Superior width and tilt angle

Overhang(Tilt)

This 5' 10.9"-wide blade stretches across the entire machine width, even when tilted. It can be tilted a generous 10 degrees right or left, allowing the operator to easily dig ditches when tilted on a flat surface.

Overhang(Angle)

Angle the blade, it extends 4.5" past the track width.
